LIVE WEBINAR

Achieving Cyber Resiliency for your next Smart Factory

Cybersecurity Health Check - Identify your weakest links

The threat of cybersecurity breaches is a top concern across industries. As hackers become more advanced, manufacturing companies struggle to identify the best methods for monitoring, identifying, and defending against security risks.

In this section, you will explore:

- Why a cyber health check is essential in establishing a solid foundation to build your security infrastructure.
- How is this helping you identify your businesses weakest security areas.
- Recommend appropriate measures to mitigate your risks.

Mr. Mohamed Anwer
CYBERSECURITY MALAYSIA

What You Need to Know to Secure Your Industry 4.0 Journey

- Get to know the tactics and techniques used by insider or intruder to perform digital attacks on your production systems i.e. MES and SCADA.
- Learn about the most Important Security Control in Guidelines for Secure Industry 4.0. Identified cybersecurity risks and prioritized to develop effective security controls.
- Learn how to manage complex logs from devices in your production systems and establish monitoring mechanism to detect abnormal behaviour.
